Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	2 Marks

Problem – Solution Fit Template

The Problem-Solution Fit connects the customer's problem with a solution that addresses the identified need. For this project, the fit is based on the requester's need for a structured and traceable car rental request process and the ServiceNow workflow used to automate approval and fulfillment.

Canvas Area	Project-Specific Content
1. CUSTOMER SEGMENT(S)	Employees / requesters who need a car rental for an organizational requirement.
2. JOBS-TO-BE-DONE / PROBLEMS	Submit rental details in one place; obtain approval; avoid manual follow-up; ensure the approved request reaches the fulfillment team.
3. TRIGGERS	A requester needs a car for a specific date, pickup/drop location, duration and car type.
4. EMOTIONS: BEFORE / AFTER	Before: uncertainty about approval and fulfillment progress. After: a structured request with approval, task creation and notification.
5. CUSTOMER CONSTRAINTS	The requester needs clear fields, a simple submission process and timely status/notification information.
6. PROBLEM ROOT CAUSE	Manual coordination between requester, approver and fulfillment team can create delays, repeated follow-up and unclear request status.
7. BEHAVIOR	Requester opens the Service Catalog item, enters rental details, submits the request and follows its approval/fulfillment progress.
8. CHANNELS OF BEHAVIOR	ServiceNow Service Catalog / portal, Requested Item record, approval process, Catalog Task and email notification.
9. SOLUTION	Car Rental Request catalog item with structured variables and Flow Designer automation that requests approval, creates a Catalog Task after approval and sends an email notification.
10. OUTCOME / FIT	The solution directly addresses the coordination problem by connecting request capture, approval and fulfillment in one ServiceNow workflow.
