

Project Design Phase

Proposed Solution Template

Date	23 September 2026
Team ID	
Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	2 Marks

Proposed Solution Template

The project team shall fill the following information for the proposed Car Rental Request Automation solution.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Car rental requests require a structured process to capture rental details, obtain approval and route approved requests to the fulfillment team. Manual coordination can cause delays and uncertainty.
2	Idea / Solution description	Create a ServiceNow Service Catalog item named Car Rental Request and automate the process using Flow Designer: request submission → Requested Item (RITM) → approval → Catalog Task creation → email notification.
3	Novelty / Uniqueness	The solution combines request capture, approval and fulfillment routing in one ServiceNow workflow tailored to the car rental scenario, with a traceable RITM and Catalog Task.
4	Social Impact / Customer Satisfaction	The requester gets a clear and structured way to submit rental requirements and receive approval-related notification, while the fulfillment team receives an actionable task after approval.
5	Business Model (Revenue Model)	This is an internal workflow-automation solution rather than a direct revenue-generating product. Its business value comes from reducing manual coordination and improving operational efficiency.
6	Scalability of the Solution	The Service Catalog and Flow Designer approach can be extended with additional request fields, car types, approval stages, fulfillment groups, notifications and reporting/Performance Analytics in future versions.
