

Project Design Phase

Solution Architecture

Date	23 September 2026
Team ID	
Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	4 Marks

Solution Architecture

The solution architecture bridges the car rental business requirement with the ServiceNow platform. The requester interacts with the Service Catalog, ServiceNow stores the submitted request as a Requested Item, and Flow Designer automates approval, fulfillment task creation and email notification.

Level 0 / High-Level Solution Architecture

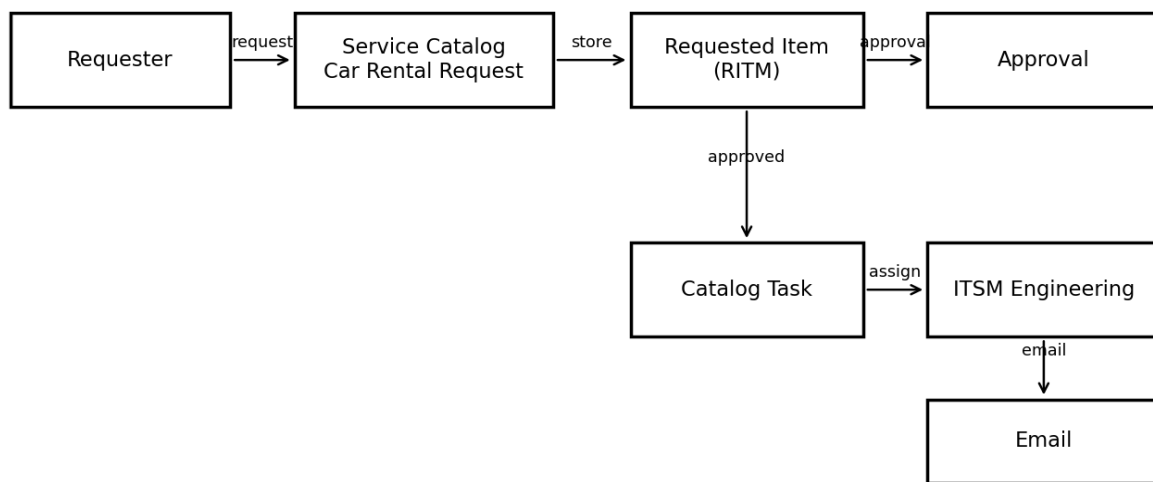

Figure 1: Architecture and data flow of the Car Rental Request Automation solution

Architecture Components

Component	Technology	Role
User Interface	ServiceNow Service Catalog / Service Portal	Requester enters the rental requirements.
Request Management	ServiceNow Service Catalog	Captures Requested Date, Pickup Location, Drop Location, Duration, Car Type and Reason.
Workflow Automation	ServiceNow Flow Designer / Workflow Studio	Requests approval and controls the automated execution path.
Approval	ServiceNow Approval	Approver approves or rejects the Requested Item.
Fulfillment	ServiceNow Catalog Task	Creates a task after approval and assigns it to the configured ITSM Engineering group.
Notification	ServiceNow Send Email action	Generates the approval notification.
Data Storage	ServiceNow platform database	Stores catalog requests, Requested Items, approvals and Catalog Tasks.

Architecture Flow

1. Requester opens the Car Rental Request catalog item.
2. Requester enters the rental variables and submits the request.
3. ServiceNow creates the Requested Item (RITM).
4. Flow Designer asks for approval.
5. If the approval condition is true, the flow creates a Catalog Task.
6. The Catalog Task is assigned to the configured ITSM Engineering fulfillment group.

7. The flow runs the Send Email action.

8. Authorized ServiceNow users can review the request and related task records.
