

1. Data Flow Diagram

The Data Flow Diagram represents how a car rental request moves through the ServiceNow solution. A requester submits the Car Rental Request catalog item, the request is stored as a Requested Item (RITM), an approval is requested, and an approved request creates a catalog task for the ITSM Engineering fulfillment team. The flow can also send an email notification after approval.

2. Main Data Elements

3. User Stories

The user-story structure follows the supplied template: User Type, Functional Requirement (Epic), User Story Number, User Story / Task, Acceptance Criteria, Priority and Release. ■filecite■turn4file1■L15-L22■

Note: No social-login, Gmail-login, LinkedIn-login, external payment gateway, or external API requirement has been added because these are not part of the implemented Car Rental Request Automation flow described in the project materials.

Date	23 September 2026
Team ID	
Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	4 Marks

Data / Record	Purpose	Used By
Car Rental Request	Captures the customer's rental requirements.	Requester / Service Catalog
Requested Date	Date on which the car is required.	Requester / Fulfillment
Pickup Location	Location where the car is to be picked up.	Requester / Fulfillment
Drop Location	Location where the car is to be returned.	Requester / Fulfillment
Duration	Number of days for the rental.	Requester / Fulfillment
Car Type	Required car type such as Sedan, SUV or Mini.	Requester / Fulfillment
Reason	Reason for requesting the rental.	Requester / Approver
Requested Item (RITM)	ServiceNow record representing the submitted catalog request.	ServiceNow Flow
Catalog Task	Fulfillment task created after approval.	ITSM Engineering
Approval State	Tracks whether the request is requested, approved or rejected.	Approver / Flow

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Requester / Customer	Car Rental Request	USN-1	As a requester, I can submit a car rental request with the required rental details.	The request is submitted and a Requested Item (RITM) is created.	High	Release-1
Requester / Customer	Car Rental Request	USN-2	As a requester, I can enter the requested date, pickup location and drop location.	The entered values are saved with the request.	High	Release-1
Requester / Customer	Car Rental Request	USN-3	As a requester, I can select the required car type and enter rental duration.	Car type and duration are stored with the request.	High	Release-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Requester / Customer	Car Rental Request	USN-4	As a requester, I can provide a reason for the car rental.	The reason is stored in the requested item.	Medium	Release-1
Approver	Request Approval	USN-5	As an approver, I can approve or reject the submitted car rental request.	The approval state is updated correctly.	High	Release-1
Fulfillment Team	Catalog Task Fulfillment	USN-6	As a fulfillment team member, I can receive a catalog task after approval.	A catalog task is created and assigned to the configured fulfillment group.	High	Release-1
Requester / Customer	Notification	USN-7	As a requester, I can receive a notification after the request is approved.	The configured email notification is generated after approval.	Medium	Release-1
Administrator	Request Monitoring	USN-8	As an administrator, I can monitor requests, approvals and fulfillment tasks.	The related ServiceNow records and flow execution can be reviewed.	Medium	Release-1

Level 0 / High-Level Data Flow
